## Hannay Offers New Self-Aligning 2" Bearing Standard

▶ Self-aligning pillow-block style bearing now standard for 8000 series and other 2" hose reels.

For all 2" reels manufactured August 2023 or later, we have redesigned and upgraded the bearing assembly on the "live" (swivel joint) end of the hose reel.

### Two primary advantages of this new bearing :

- New bearing assembly has a self-aligning feature, where the bearing can move a few degrees in each direction to ensure that concentricity of the reel spool on the frame is perfect.
- The 2-piece bearing housing is made from 304 stainless steel (while the bearing itself is a greaseable bronze spherically machined insert piece) for ultimate corrosion resistance and durability.
