## Advantages of Stainless Steel Rollformed Frame Option

▶ Hannay Reels offers a stainless steel construction rollformed frame option on larger power rewind reels for industrial, fire/rescue and fuel delivery applications. In the past aluminum square tubing frames have been the standard for these reels, while a durable frame option, rollformed stainless steel frames are lower in cost, have quicker lead times and a number of other advantages.

### Features & Benefits:

- Rollformed frame are twice as thick as square tubing frames and 304 grade stainless steel is higher in strength providing a more durable base.
- Deep-flanged motor plate for extra rigidity.
- Symmetrical motor mounting holes for greater flexibility on motor positioning,
- Inclusion of all standard mounting holes on the tops and sides of the channel, making after-market addition of roller brackets, chain guards and other accessories easier.
- Gussets typically used on square tubing aluminum frames are no longer needed, providing a cleaner look.

### ORDERING INFORMATION:

Contact Hannay Reels Inside Sales Department at: 877-467-3357 or email [reels@hannay.com](mailto:reels@hannay.com) for more information.
