

IMPORTANT MAINTENANCE INSTRUCTIONS

All Hannay Arc Welding Reels
(Prefix SWCR, WCR, TWCR)
All Hannay Utility Grounding Reels
(Prefix SGCR, GCR)

Daily or Before Each Use – Check the reel, cable and clamps for damage or cuts. Make sure all connections are tight and that the reel is mechanically sound.

Monthly (or more frequently with heavy use) – Locate the grease zerk fitting on the side of one of the reel discs. With a hand-operated grease gun, pump in a couple pumps of grease. Hannay Reels recommends Sanchem NO-OX-ID conductive grease compound or equivalent. Such grease can be found at your local welding supplies distributor.
