Hannay Brings the *Reel* Deal to Equip Expo 2023 for Grounds and Maintenance Professionals

Westerlo, N.Y. – Hannay Reels will showcase five products at the 2023 Equip Expo in Louisville, October 17-20, inside the Kentucky Exposition Center. Attendees are invited to stop by booth 3040 for an up-close look at reels designed for the grounds and maintenance industries.

Hannay Reels is known for building durable, dependable, hard-working reels. Each product is designed to exact specifications for ultimate performance in landscaping, hardscaping, and manufacturing trades. Specifically, Hannay's hose reels support a safe and high-efficiency work environment for tasks like watering, irrigation, lawn care, spraying, fertilizing, hydro-seeding, pest control, washdown, pressure washing, and steam cleaning. Alternatively, cable reels are available for onsite projects which require electric and power tools.

The following models will be on display at the Equip Expo:

1000-Series Reel

This compact product can handle twin 1/4" through 1/2" ID hose. The lightweight, compact, e-coated frame makes it ideal for pressure washing, washdown, spray down, and air operations. A direct crank rewind is permanently attached for smooth retraction.

1100-Series Reel

Created for grounds, maintenance, restaurants, hotels, washdown operations, gardens, and even home use, this portable reel on wheels is ideal for projects on-the-go. It's removable, steel handlebar makes this unit versatile for tight spaces, storage, and transport. The 1100 can handle 3/8" to 5/8" ID hose and pressures up to 3,000 psi.

1500 Reel

Manufactured with your choice of a manual or power rewind, the 1500 is ideal for lawn care, pest control, pressure washing, agricultural applications, steam cleaning, air supply, water and more. This lightweight,

compact reel is designed for long lengths of 1/4" through 5/8" ID hose. It operates with standard pressure to 3,000 psi with availability up to 10,000 psi.

N700 Reel

This spring rewind reel is ideal for lubrication, water, air tools, high pressure, assembly operations and general industrial applications. It handles 1/4" through 1/2" single ID hose. The N700 comes with standard pressures up to 3,000 psi and is customizable up to 10,000 psi. A declutching arbor prevents damage from reverse winding, extending the life of the hose.

SNC Reel

The SNC reel is a low-profile reel that is built to handle up to 500 feet of 3/8" to 5/8" ID hose. It's constructed with non-corrosive material, making it a great tool for lawn care, pest control, agricultural applications, and horticulture maintenance. The reel can be ordered with a manual or power rewind, while maintaining its lightweight build and versatility for multiple uses. This series is also available with a stainless steel stacking kit – allowing the use of two reels in a single footprint.
